

BDM 600-LV PLC Wi-Fi NEP

What is a BDM 600-lv solar microinverter?

The BDM 600-LV solar microinverter is designed to support up to two 360W high power panels. Additionally, it features integrated ground (IG) that eliminates the need for grounding conductor (GEC) on the DC side. The unique design of the BDM 600-LV model, in addition to being functional, it is unique and original, available only with NEP.

How do I connect a PV module to a bdm-600?

PV module to the positively marked DC connector (female socket) of the BDM-600. Next, do the same for the second set of DC connectors from the second module. Repeat for all remaining PV modules using one BDM-600 for each set of modules. ENSURE THAT ALL AC AND DC WIRING IS CORRECT.

What is a NEP microinverter?

Integrated 14 AWG AC cables. NEP microinverters convert the current generated by the photovoltaic modules (DC) into alternating current (AC) to deliver it to the electrical grid. Do you need more information? Write us!

Scope: Provide advanced solar panel level power conversion, safety, and data solutions. Regions: headquartered in Silicon Valley with global operations. As the only Japan-certified micro inverter, when solar installations are demanding, ...
