

to commercialize of solid-state batteries. While liquid-based cells are commercially well developed and the manufacturing of the active and passive materials as well as the battery cells have been refined over the years, the processing and especially upscaling of solid-state electrolytes and solid-state battery cells is still challenging.

Recently, solid-state halide electrolytes have been widely reported; these electrolytes exhibit relatively high ionic conductivity ($> 1 \text{ mS} \cdot \text{cm}^{-1}$), high oxidation stability ($> 4 \text{ V}$ against Li^+/Li), and favorable mechanical softness (similar to that of sulfide electrolytes) [5], [6], [7]. For example, our group developed new wet-chemistry methods to synthesize halide ...

Due to their distinctive security characteristics, all-solid-state batteries are seen as a potential technology for the upcoming era of energy storage. The flexibility of nanomaterials shows enormous potential for the advancement of all-solid-state batteries" exceptional power and energy storage capacities. 2024 Frontier and Perspective articles

Interestingly, SSE also shows a potential application in the next generation of high-performance energy storage devices such as Li S battery with sulfur as the cathode, Li O₂ battery using O₂ as the cathode, ... This solid-state battery design matched with lithium anode shows a lower degree of polarization and higher capacity.

A solid-state battery is an advanced energy storage device that uses solid-state electrolytes instead of liquid or gel electrolytes in traditional lithium-ion batteries. It replaces the liquid electrolyte with a solid material, typically a ceramic or polymer, which enhances safety and increases energy density.

Solid state batteries (SSBs) are utilized an advantage in solving problems like the reduction in failure of battery superiority resulting from the charging and discharging cycles processing, the ability for flammability, the dissolution of the electrolyte, as well as mechanical properties, etc [8], [9]. For conventional batteries, Li-ion batteries are composed of liquid ...
