

What is enerbond caprack?

Enerbond Caprack is a flexible module design of graphene & solid-state battery to meet customer's customized demand for large power. The system provides the capacity design from 14.4kWh to 150kWh, and the voltage from 400V to 800V, which is expandable by adding more core modules.

What are the different types of graphene battery technology?

Modbus (RS485, RTU), Canbus, and TCP communication are available. As golf courses and recreational facilities seeking eco-friendly solutions that enhance efficiency and performance, the integration of Graphene Battery technology is poised to redefine the golfing experience.

What is a caprack BMS?

Caprack design is based on high C rate cells and medium-high voltage, and it can be installed indoor and outdoor. The smart BMS with CANBUS, MODBUS and TCP protocol, is convenient to communicate with PCS and EMS. It's the perfect option for high-end demand of commercial and industrial energy storage system.

Graphene solid state, Long life, stable and maintenance free bring much benefit to the end user, Wall & ground mounted available, smart manage system. ... Enerbond provides a long life & high reliable battery solution to generate clean ...
