

A suitable charging protocol is required for the optimal charging of LIBs. During the charging of LIBs, the battery charger controls the voltage, current, and/or power of LIBs [10]. Fast charging techniques for EV applications generally aim to achieve the optimal balance between the two contradictory objectives of reducing charging time and extending the lifetime ...

To overcome the conflict between charging speed and rise in temperature an optimal multistage constant current (MSCC) based charging strategy has been investigated under different operating conditions. In addition, the proposed charging profiles have been studied ...

The novel DC-TENG demonstrates effective mechanical energy harvesting to power electronics solely or to directly charge an energy storage unit simultaneously, which can greatly accelerate the miniaturization of self-powered systems used in wearable electronics ...

Constant Voltage/Constant Current (CC/CV) charging is a prevalent method for Li-ion battery charging, with researchers exploring various approaches to implement this mode within wireless power transfer (WPT) systems for EV batteries.

After the current becomes constant, the energy within the magnetic becomes constant as well. Thus, the inductor takes no more energy, albeit its internal resistance does cause some losses as the current flows through it, such that $P_{losses} = I_m^2 R$ Thus, the energy-storage capabilities of an inductor are used in SMPS circuits to ensure no ...

Tanim et al. [13] demonstrated that using CC-CV, Two-step constant current, and pulse charging with charging currents ranging from 6.8C to 9C, the cell can be charged to over 80% in 10 min. Yang et al. [14] presented an asymmetric temperature modulation approach, claiming to charge the cell to an 80% state of charge with a high cycle life using ...

Modular multilevel converter battery energy storage systems (MMC-BESSs) have become an important device for the energy storage of grid-connected microgrids. The efficiency of the power transmission of MMC-BESSs has become a new research hotspot. This paper outlines a multi-stage charging method to minimize energy consumption and maximize ...
