

Deep Cycle AGM Battery S-Creation

What is AGM deep cycle battery?

AGM DEEP CYCLE Batteries with a 10 years floating design life, specially designed for frequent cyclic discharge usage. By using strong grid and specific paste plate, these batteries have 30% more cyclic life time than standby series. Suitable for solar energy system, golf cart, electric wheelchair, etc.

Where are AGM deep cycle batteries made?

Our AGM Deep Cycle batteries are developed in the U.S.A. and specifically manufactured for U.S. Battery under our guidelines assuring our customers they are being provided the highest quality AGM batteries available. positive active material designed to maintain structure during deep cycling.

What is the difference between 3rd and deep cycle AGM battery?

The 3rd type is focused on higher current discharge as for motive power. Deep cycle AGM battery is a type of VRLA battery focused on deep cycle performance. Sealed, maintenance-free, the biggest advantage, excellent deep cycle life, achieve more than 1000 cycles at 50% DOD.

What are the different types of deep cycle batteries?

Deep cycle batteries are an important component of many off-grid and renewable energy systems, and they come in three main types: flooded lead acid, gel, and AGM (absorbent glass mat). Each type has its own advantages and disadvantages, and choosing the right one depends on your specific needs and application.

How long do deep cycle batteries last?

Deep cycle batteries have an average lifespan of 5-7 years, depending on the type and maintenance. To ensure that your system remains functional and reliable over the long term, it's important to choose a battery with a long lifespan. One factor that affects the lifespan of deep cycle batteries is the type of battery you choose.

How do I choose a deep cycle battery?

Deep cycle batteries are designed to provide a sustained supply of power over a long period of time, making them an essential component in many off-grid energy systems. When selecting a deep cycle battery, it's important to consider your power requirements and choose a battery with a discharge rate that can meet them.
