

Deep Cycle Batteries Voltec Storage Battery

What is a deep cycle battery?

Deep cycle batteries are an essential component of many electrical systems, providing reliable power storage for a variety of applications. Whether you have a deep cycle battery for your boat, RV, or solar power system, proper storage is crucial to maintain its performance and extend its lifespan.

How long do deep cycle batteries last?

When we look at how long deep-cycle batteries last, we look at the number of cycles that the battery will handle. A cycle is when the battery is charged up, then used or discharged and recharged. Most lead-acid deep-cycle batteries (flooded, AGM or Gel) will generally last around 200 cycles. This is one area where lithium really shines.

What is a lithium deep cycle battery?

Lithium deep-cycle batteries are the new battery taking the world by storm. They are a type of deep-cycle battery that offers several huge advantages over traditional lead-acid batteries. They are half the weight, have a considerably longer cycle life, and can be discharged more deeply without damage. What Are Deep-Cycle Batteries Used For?

How to store a deep cycle battery?

When it comes to storing a deep cycle battery, it's essential to disconnect and remove it from the device or system it powers. This step is crucial to prevent any parasitic drain or accidental discharge of the battery during the storage period. Here's how to disconnect and remove the battery:

Can a deep cycle battery withstand 80% discharge?

It is important to keep in mind that while deep cycle batteries can withstand up to 80% depth of discharge (DoD) It's important to note that most manufacturers advise against going more than 50% to maximize the battery's lifespan. Starting (cranking) batteries share many similarities with deep-cycle batteries.

Which deep cycle battery is best for solar?

The best deep cycle battery for solar depends on your own situation. If you're looking to spend as little as possible upfront, flooded lead-acid batteries will fit the bill. However, for a long-term investment and tons of perks that lead-acid can't offer, consider lithium batteries.
