

Among currently available energy storage (ES) devices, dielectric capacitors are optimal systems owing to their having the highest power density, high operating voltages, and a long lifetime. Standard high-performance ferroelectric-based ES devices are formed of complex-composition perovskites and require precision, high-temperature thin-film fabrication. The discovery of ...

The ubiquitous, rising demand for energy storage devices with ultra-high storage capacity and efficiency has drawn tremendous research interest in developing energy storage devices. Dielectric polymers are one of the most suitable materials used to fabricate electrostatic capacitive energy storage devices with thin-film geometry with high power density. In this ...

Concurrently achieving high energy storage density (ESD) and efficiency has always been a big challenge for electrostatic energy storage capacitors. In this study, we successfully fabricate high-performance energy storage capacitors by using antiferroelectric (AFE) Al-doped $\text{Hf}_{0.25}\text{Zr}_{0.75}\text{O}_2$ (HfZrO:Al) dielectrics together with an ultrathin (1 nm) $\text{Hf}_{0.5}\text{Zr}_{0.5}\text{O}_2$...

Due to high power density, fast charge/discharge speed, and high reliability, dielectric capacitors are widely used in pulsed power systems and power electronic systems. However, compared with other energy storage devices such as batteries and supercapacitors, the energy storage density of dielectric capacitors is low, which results in the huge system volume when applied in pulse ...

Dielectric materials find wide usages in microelectronics, power electronics, power grids, medical devices, and the military. Due to the vast demand, the development of advanced dielectrics with high energy storage capability has received extensive attention [1], [2], [3], [4]. Tantalum and aluminum-based electrolytic capacitors, ceramic capacitors, and film ...

Compared with other energy storage devices, such as solid oxide fuel cells (SOFC), electrochemical capacitors (EC), and chemical energy storage devices (batteries), dielectric capacitors realize energy storage via a physical charge-displacement mechanism, functioning with ultrahigh power density (MW/kg) and high voltages, which have been widely ...

As an important power storage device, the demand for capacitors for high-temperature applications has gradually increased in recent years. However, drastically degraded energy storage performance due to the critical conduction loss severely restricted the utility of dielectric polymers at high temperatures. Hence, we propose a facile preparation method to suppress ...
