Is gravity energy storage an attractive energy storage option?

Interest in energy storage systems has been increased with the growing penetration of variable renewable energy sources. This paper discusses a detailed economic analysis of an attractive gravitational potential energy storage option, known as gravity energy storage (GES).

Can gravity store energy?

The utilization of the gravity to store energy of any form is an idea in its infant stage [4]. Study shows that the pumped hydroelectric storage system (PHES) still remains the current most harnessed form of storage in the world on a long term and on a large scale [5].

What is a gravity energy storage system (GES)?

Gravity energy storage systems (GES) for grid support and renewable energy integration. G-VAULT(TM) is a family of gravity energy storage products that decouple power and energy while maintaining a high round-trip efficiency.

Does gravity energy storage provide energy arbitrage service?

Techno-economic analysis of gravity energy storage. Energetic performance of Gravity Energy Storage (GES) with a wire rope hoisting system. GES and GESH offer interesting economic advantages for the provision of energy arbitrage service.

What is compressed air gravity storage?

This system provides power and energy in the range of 40 MW/160MWH to 1.6GW/6.4GWH [8]. Similarly, the compressed air gravity storage is also an improved modification of Pumped hydro gravity energy storage technology.

How much does gravity energy storage cost?

Depending on the considered scenarios and assumptions, the levelized cost of storage of GES varies between 7.5 EURct/kWh and 15 EURct/kWh, while it is between 3.8 EURct/kWh and 7.3 EURct/kWh for gravity energy storage with wire hoisting system (GESH). The LCOS of GES and GESH were then compared to other energy storage systems.

Gravity Power, a US based company is in the process of setting up the first commercial large scale gravity storage device in Penzberg, Germany. With a 30m diameter power shaft extending 500m meters deep, the facility will produce 160 Mwh or 40 MW for 4 hours of bulk energy storage in return for consuming 40 MW for about 5 hours. GravityLight

The company recently commissioned a 25 MW/100 MWh gravity-based energy storage tower in China. This tower, the world's first that does not rely on pumped hydro technology, uses electric motors to lift and lower large blocks, harnessing gravity's force to dispatch electricity as needed.
