

EGB Series Home Energy Storage 5 12 10 24Kwh

How many kWh does a HomeGrid battery produce?

HomeGrid batteries have roundtrip efficiencies of 98 percent; this means that for every 10 kilowatt-hours (kWh) of electricity you put into the battery, you'll receive 9.8 kWh of output. In most cases, homes with a HomeGrid battery will charge and discharge their battery every day. So, how long do the HomeGrid batteries last?

What is the size of a HomeGrid battery?

HomeGrid's Compact series comes in one size, with 5.12 kilowatt-hours (kWh) of usable capacity. Its Stack'd series can include between two and eight modules, with each module having 4.8 kWh of usable capacity (so your battery could be anywhere from 9.6 to 38.4 kWh in total). Here's what you need to know about the size of HomeGrid batteries:

How long does a HomeGrid battery last?

The Compact and Stack'd series both come with a 10-year, or 4,000 cycles, warranty, and HomeGrid guarantees that the battery will maintain at least 60 percent of its capacity to hold a charge during that time period.

How many batteries can I connect to a HomeGrid battery system?

HomeGrid batteries are also modular - meaning you can connect multiple batteries in parallel to increase the size of your battery system. You can connect up to 63 Compact series batteries (for a total of 322.6 kWh usable capacity) or up to 15 Stack'd series batteries with a Sol-Ark 15-K Inverter (for a total of 576 kWh usable capacity).

AnyGap EGB Series - Home Energy Storage 10Kwh is an innovative solution for those who seek to reduce their reliance on grid power. With optimized dynamic MPP algorithm, hardware and software, this low voltage battery 10.24KWh is ...
