

## ES D-Series

What is the es-D series servo?

The ES-D series offers an alternative for applications requiring high performance and high reliability when the servo was the only choice, while it remains cost-effective.

What is the difference between es-m2 and es-D series drives?

The encoder output of the ES-M2 series motor is a HDD15 connector while the encoder input of the ES-D808 / ES-D1008 is screw terminal, so an extension cable is required between the drive and motor. The ES-D series drives can accept differential, PNP(sourcing) and NPN(sinking) pulse, direction and enable control signals.

What is an ES servo?

The ES (easy servo) series easy servos offer an alternative for applications requiring high performance and high reliability when the traditional servo was the only choice, while it remains cost-effective. The system includes an easy servo motor combined with a fully digital, high performance easy servo drive.

What are eschwank es/ESD series heating systems?

eSchwank ES/ESD Series (electricSchwank) heating systems offer a streamlined, yet effective heating solution for any indoor or outdoor spaces. They are available in a range of sizes, wattages, and voltages that can provide appropriate warmth to any indoor or outdoor area, from a small room to an expansive open-air commercial space.

What is a series resistor?

Series connect resistors for current-limiting when +12V or +24V used. The same as DIR and ENA signal. Direction signal: In single-pulse mode, this signal has low/high voltage levels, representing two directions of motor rotation.

The Discovery ECO series has a tweed textural solid that has become the Static Dissipative Carpet Tile anchor of the StaticSmart line. StaticSmart® ESD, Discovery ECO series is the perfect static dissipative flooring choice for E911, ...
