

ES SH-Series

What is the difference between E series and S series?

The E series has ≥ 25 dB channel separation, ≤ 2 dB channel balance, and a frequency response of 15Hz-25kHz. The S series has tighter tolerances of ≥ 28 dB channel separation, ≤ 1.5 dB channel balance, and an extended frequency response of 15Hz-32kHz.

What are the specifications of the E series cartridges?

Digging a bit further into the specifications shows that all four cartridges have cross-shaped armatures, aluminum cantilevers, a recommended tracking force of 2 grams, ± 1 mm tracking ability, and a 5-gram total weight. The E series has ≥ 25 dB channel separation, ≤ 2 dB channel balance, and a frequency response of 15Hz-25kHz.

What's the difference between ES300h and ES250?

On that same 200-mile test route, the ES300h delivered 45 mpg, while the ES250 rang up 33 mpg. For more information about the ES's fuel economy, visit the EPA's website. With its stylish, asymmetrical dash and high-quality materials, the ES's cabin creates a plush environment for passengers.

What is the difference between S series and High-Output models?

The S series has tighter tolerances of ≥ 28 dB channel separation, ≤ 1.5 dB channel balance, and an extended frequency response of 15Hz-32kHz. The high-output versions have a coil impedance of 130 ohms at 1kHz and a recommended load impedance of 47k ohms.

OverviewPremiseCharactersProductionEpisodesReceptionHome entertainmentGamesM*A*S*H (an acronym for Mobile Army Surgical Hospital) is an American war comedy drama television series that aired on CBS from September 17, 1972, to February 28, 1983. It was developed by Larry Gelbart as the first original spin-off series adapted from the 1970 feature film M*A*S*H, which, in turn, was based on Richard Hooker's 1968 novel MASH: A Novel About Three Army Doctors. The ...
