

The use of renewable energies such as wind and solar power continues to increase in many countries since greenhouse gas emissions from conventional power plants have resulted in severe environmental problems [1, 2]. The wind power generation reached 3% (i.e. 435 GW) of global electricity production in 2015 and it is expected to increase from 11.6% (3599 ...

Adiabatic Compressed Air Energy Storage (A-CAES) was proposed to eliminate fossil fuel consumption and CO₂ emission [13], [14], [15]. The main difference between an A-CAES system and a conventional CAES system is that additional heat storage is released in a separate heat storage reservoir during the compression process.

The potential energy of compressed air represents a multi-application source of power. Historically employed to drive certain manufacturing or transportation systems, it became a source of vehicle propulsion in the late 19th century. During the second half of the 20th century, significant efforts were directed towards harnessing pressurized air for the storage of electrical ...

The only two energy storage systems suitable for large-scale (>100 MW) commercial applications are the pumped hydro storage (PHS) system and the compressed air energy storage (CAES) system [12, 13]. The CAES system has some advantages, such as large storage capacity, economic sustainability, and extended lifespan [8, 10, 14, 15]. The CAES ...

To date, research interest in LAES has increased year by year, focusing mainly on techno-economic analysis and system optimisation. Guizzi et al. [13] conducted a thermodynamic analysis of a LAES plant. The results indicated that when the cryoturbine's isentropic efficiency is at least 70 %, the RTE can achieve 55 %.

Another decoupled energy storage technology, Liquid Air Energy Storage (LAES), has received increasing attention in the UK since the 300 kW/2.5 MWh pilot scale demonstration plant, built by Highview Power Storage, started operation in 2010 [7], now in use at the University of Birmingham [8] pared to CAES, which stores air in a gaseous phase, a much higher ...

This study investigates the economic and resilience co-optimization of a decentralized hybrid energy system (HES) within scenarios involving limited energy sources and a hybrid energy storage solution. ... On the other hand, among various ESS, compressed air energy storage (CAES) emerges as a superior alternative in terms of lifespan, capacity ...
