

# Energy storage cloud platform wins bid

Which energy storage-as-transmission pilot project was awarded?

The award was given for a battery-based energy storage-as-transmission pilot project deployed in Lithuania by Litgrid and supplied with Fluence's Gridstack (TM) grid-scale energy storage product.

How does energy storage bidding work?

The supply and demand sides match until all demand is met by the N-th iteration. To sum up, the energy storage devices are subject to multiple rounds of bidding starting from moment t. Eventually the platform determines the day-ahead electric energy trading bidding results and the optimal matching strategy.

How is the bidding matching process resolved on the cloud energy storage platform?

The bidding matching process between the two trading parties on the cloud energy storage platform is resolved using Eq. (18). The energy storage device reported to the cloud energy storage platform from 6 p.m. to 7 p.m. can supply electricity. The electrical energy supplied by the energy storage device is shown in Table 2.

Why should energy storage and renewable assets be bidding?

Conventional bidding approaches for energy storage and renewable assets can't keep up with the volatility and complexity of rapidly changing wholesale markets. Increase energy and ancillary service revenues and manage risk with Mosaic -- a leading intelligent bidding software with over 12.3 GW of assets under management.

What is a cloud energy storage integrated service platform?

The cloud energy storage integrated service platform is a cloud energy storage ecosystem built based on battery energy storage, combined with advanced technologies such as the Internet of Things, 5G, big data, cloud services and blockchain.

How a cloud energy storage platform works?

The platform side needs to sort out the total supply of power and total demand power information for each time period and release the information. In the bidding and scheduling matching phase, the cloud energy storage platform conducts centralized bidding based on the quotations of small energy storage devices.

Energy Storage System: Tendered Capacity: 500 MW/3000 MWh: Date of e-Reverse Auction: 08.12.2022: Opening L1 Tariff (INR/MWh/Year) 3191208.99: Name of Bidder: Bid Capacity (MW/MWh) Awarded Capacity (MW/MWh) Final Tariff (INR/MWh/Year) Greenko Energies Private Limited: 500/3000: 500/3000: ... Greenko's Cloud Platform To Offer Discoms ...

The energy platform is made of three key components: the energy cloud for the generation, distribution and storage of electricity, the digital platform for industry and customers to jointly manage the energy

infrastructure, and the transaction platform for trading and services.

Gensol Engineering announced that it has won the bid for Gujarat Urja Vikas Nigam's (GUVNL) 250 MW (500 MWh) Battery Energy Storage Project valued at Rs 13.4 billion. This strategic initiative aims to supply electricity on an "on-demand" basis to Gujarat's Distribution Companies (DISCOMs) during peak and off-peak hours.

IndiGrid, India's first and largest listed power sector infrastructure investment trust (InvIT), has secured a significant project after receiving a Letter of Intent (LOI) from Gujarat Urja Vikas Nigam Limited (GUVNL) to Design, Supply, Test, Install, Commission, Operate, and Maintain a 180 MW / 360 MWh Battery Energy Storage System (BESS) in Gujarat.

Fluence Mosaic(TM) maximizes renewables and storage revenue with intelligent, automated bidding software, so you can deploy and use more clean energy with higher ROI. Conventional manual bidding approaches for energy storage and renewable assets cannot keep up with the volatility and complexity of rapidly changing wholesale markets.

Greenko Group has won 3 GWh of energy storage capacity from NTPC Renewable Energy Ltd, the renewables arm of state-owned power producer NTPC. It won the capacity by quoting the lowest bid in the technology-agnostic storage tender that saw participation from Li-ion battery, Na-S battery, and compressed-air storage technologies in addition to ...

Gensol Engineering Ltd has won GUVNL's 250 MW/ 500 MWh standalone BESS tender (Phase III). This marks its yet another win for the EPC developer in the battery storage space after securing 70 MW in GUVNL's Phase II 250 MW/500 MWh standalone BESS tender in March this year. The company won the latest GUVNL BESS tender by quoting a ...
