

How can energy storage be used in future states?

Target future states collaboratively developed as visions for the beneficial use of energy storage. Click on an individual state to explore identified gaps to achievement. Energy storage is essential to a clean and modern electricity grid and is positioned to enable the ambitious goals for renewable energy and power system resilience.

Why was the energy storage roadmap updated in 2022?

The Energy Storage Roadmap was reviewed and updated in 2022 to refine the envisioned future states and provide more comprehensive assessments and descriptions of the progress needed (i.e., gaps) to achieve the desired 2025 vision.

Should energy storage be co-optimized?

Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.

The 11th edition of India Energy Storage Week () is our annual flagship event, a one-stop networking platform for energy storage, e-mobility & green hydrogen sector. The aim is to get the entire value chain of these sectors at one venue. The IESW series of exhibitions has created a niche in the energy storage, electric vehicle & hydrogen segment and proved very beneficial ...

The German government has opened a public consultation on new frameworks to procure energy resources, including long-duration energy storage (LDES). Under the proposed Kraftwerkssicherheitsgesetz, loosely translated as the Power Plant Safety Act, the Ministry for the Economy and Climate Change (BMWK) would seek resources, including 12.5GW of ...

From now to 2025, it is foreseeable that technical modifications of coal-fired power plants to fit the energy-storage requirement would become a new investment trend of the utilities. ... China's Energy Storage Market: Still Full of Opportunity. Several policy signals in the past months suggest that the nation's taking a step back from its ...

The European Union's energy storage sector has witnessed significant advancements, particularly in 2023, with a record-breaking milestone of over 10 GW of cumulative storage installations. This growth is driven by the increasing adoption of battery storage technologies, especially in residential sectors across Europe, with Germany, Italy, and the UK leading the charge.

North American Clean Energy magazine is at the forefront of the renewable energy sector, covering the latest

developments in solar, energy storage, wind and energy efficiency. Published 6X times per year, reaching a print circulation of over 32,000 subscribers and 27,000 digitally, and with weekly solar and bi-weekly energy storage e-newsletters.
