

Fun fact: While I'm not aware of any large-scale use of wound spring energy storage used outside of clockwork, flywheels are something used in industry to store energy. They are particularly useful for short term, high discharge applications. There are even prototypes for at home energy storage and vehicles that use flywheels instead of batteries.

Your toy car storage shelf is made of FSC-certified sustainably harvested wood and was rigorously tested to be safe for kids 3 years and up. Exceeds ASTM standards and tested for sharp points and edges, flammability, lead and phthalates. This ...

\$begingroup\$ Look at any "windup" toy car or hobby clockwork motor. You input energy rotationally with the input "key" and the energy is released rotationally to drive wheels or similar. ... Look at any old windup watch or clock and most likely the energy storage mechanism is a coil spring. Some old clocks are powered by dropping weights, but ...
