Large energy is required for traditional CO₂ fixation, leading to more CO₂ emission and additional pollutants. Recently, integrating renewable energy with CO₂ fixation has attracted increasing attention as a sustainable strategy. Here, based on a systematic investigation on aprotic Li-CO₂ electrochemistry, we first provide an alternative strategy for either CO₂ ...

In linear dielectric polymers (the electric polarization scales linearly with the electric field, such as polypropylene, PP), the electrical conduction loss is the predominant energy loss mechanism under elevated temperatures and high electric fields [14, 15] incorporating highly insulating inorganic nanoparticles into polymer dielectrics has been proved effective in the ...

A long-life lithium-ion battery with a highly porous TiNb₂O₇ anode for large-scale electrical energy storage+ Bingkun Guo, ? * a Xiqian Yu, ? b Xiao-Guang Sun, a Miaofang Chi, c Zhen-An Qiao, a Jue Liu, b Yong-Sheng Hu,* d Xiao-Qing Yang, b ...

Electrochemical energy storage (EES) plays an important role in personal electronics, electrified vehicles, and smart grid. Lithium-ion batteries (LIBs) and supercapacitors (SCs) are two of the most important EES devices that have been widely used in our daily life. The energy density of LIBs is heavily dependent on the electrode capacity, in ...
