

Benefiting from the unique flower-like structure with open and interconnected hierarchical pores, the obtained materials exhibit prominent electrochemical energy storage property and satisfactory CO₂ capture capability. As electrode materials for supercapacitors, the as-prepared materials display an excellent capacitive behaviors including ...

Flower to raise SEK 47 million from 41an Invest. Flower, a Stockholm, Sweden-based SAAS provider for the energy vendors, raised SEK 47 million (\$4.9 million). The money was raised from investors from Sweden, including 41an invest AB. Proceeds will be used to develop the company's AI-based technology for electrical flexibility. Flower, founded as ...

Swedish battery storage trading and optimization company Flower is rapidly growing its project fleet, now acquiring one of the nation's largest sites. The project is a ready-to-build 40 MW/80 MWh battery energy storage system (BESS) site developed by Nasdaq Stockholm-listed renewables developer Arise.

High-density active site COFs with a flower-like morphology for energy storage applications+ Yuanyuan He, a Ning An, * b Congcong Meng, c Kefeng Xie, b Xiaotong Wang, a Xiuyan Dong, b Daming Sun, b Yuying Yang a and Zhongai Hu * a

Phase change materials (PCMs) are widely favored because of their high latent heat and considerable potential for thermal storage. However, poor photothermal conversion and limited thermal conductivity capability severely limit their potential in a variety of applications. Herein, polyethylene glycol (PEG) was loaded into three-dimensional (3D) flower-like CuO with ...

In recent years, developing high-energy storage systems has become imperative in order to meet the surging demand for energy and alleviate global energy shortages and environmental pollution problems. ... The unique micro-flower morphology composed of interconnected nanorods provides sufficient pathways for electron/ion transport.

In response to global energy problems, industrial waste heat storage systems are a useful strategy as important as clean energy. Slow magnesium oxide hydration rate and incomplete hydration are the main obstacles to the application of MgO/Mg(OH)₂ to heat storage systems. In this study, porous structures are introduced into pure magnesium oxide materials ...
