What is borehole thermal energy storage (BTES)?

As a widespread seasonal TES, borehole thermal energy storage (BTES) can remove the time gap between thermal energy supply and demand in the energy grid by storing the heat in seasons with excessive heat and recouping the heat back into the system in colder seasons when there is a higher demand for thermal energy.

Can borehole thermal energy storage improve the exploitation of solar energy?

For instance, in a small-scale solar district heating system in Italy with a seasonal (long-term) thermal storage capacity, it was proven that implementing borehole thermal energy storage (BTES) enhanced the exploitation of solar energy by 40 %.

What is borehole storage?

With borehole storage, vertical borehole heat exchangers are inserted into the underground, which ensure the transfer of thermal energy toward and from the ground (clay, sand, rock, etc.). Many projects are about the storage of solar heat in summer for space heating of houses or offices.

What is next generation borehole thermal energy storage?

Next generation borehole thermal energy storage was built in Crailsheim in 2008. The storage consists of 80 boreholes with a depth of 55 m in a first construction phase. The storage volume (37,500 m³) is a cylinder with the boreholes situated in a 3 × 3 m square pattern.

Is a borehole thermal energy storage possible in Neckarsulm?

Since 1997 a pilot borehole thermal energy storage is in realization in Neckarsulm. In the first step, the feasibility of the storage concept was proven with the installation of a 5,000 m³ research storage at the site of the plant. The ducts are double-U-pipes made of polybutene with a depth of 30 m.

Is borehole thermal storage safe?

Until now, borehole thermal storage technology has been proven to be safe. However, for further large-scale commercial use of this technology, broader studies should be considered regarding the geochemical alteration of groundwater, cross-contamination, and thermal impact of neighboring systems in dense urban areas . 7.
