

# How long can the light storage bottle glow

How long do glow sticks last?

Standard durations for Cyalume light sticks range from 5 minutes (high-intensity) to 12 hours, including a variety of durations in between. Each of these durations is tested to perform at 72 degrees Fahrenheit. It's important to note the temperature because this can have an impact on the stick performance.

How do you prolong the life of a glow stick?

You can prolong the lifespan of your glow light stick by putting it in the freezer, in cold water, or otherwise cooling it down, thus slowing the chemical reaction inside of the sealed tube filled with chemicals. What color glow stick lasts the longest?

How do you store glow sticks?

After you pop a glow stick and are done with them for the night you can store them in your freezer or cooler and by doing this it will slow down the chemical reaction. The next night take them out, shake it and the glowing will continue. How far can glow sticks be seen?

Can a glow light stick be frozen?

No, once you have activated a glow light product it will glow until the chemical reaction is finished. You can however prolong the life of your glow light stick or glow light product after it has been activated. Stick it into the freezer. Freezing an activated glow light product will slow the chemical reaction.

Are glow light sticks flammable?

Yes. All our chemical glow light sticks and products come in a sealed plastic case. Even if the outer casing of the glow light stick or glow light product is somehow punctured or broken open, the chemical contents are non-toxic and non-flammable. Contact with eyes or ingesting of the fluid should be avoided because irritation will result.

Are glow sticks good for survival?
