

Natural disasters can lead to large-scale power outages, affecting critical infrastructure and causing social and economic damages. These events are exacerbated by climate change, which increases their frequency and magnitude. Improving power grid resilience can help mitigate the damages caused by these events. Mobile energy storage systems, ...

During emergencies via a shift in the produced energy, mobile energy storage systems (MESSs) can store excess energy on an island, and then use it in another location without sufficient energy supply and at another time [13], which provides high flexibility for distribution system operators to make disaster recovery decisions [14]. Moreover, accessing ...

Multi-Functional Energy Storage Entity (MFES) with its battery energy storage capability will enable integration of renewable energy into Kosovo's energy system and improve security of supply. The Energy and Climate Policy Support Activity aims to support technical and administrative capacity building for Kosovo's energy and climate ...

In the high-renewable penetrated power grid, mobile energy-storage systems (MESSs) enhance power grids' security and economic operation by using their flexible spatiotemporal energy scheduling ability. It is a crucial flexible scheduling resource for realizing large-scale renewable energy consumption in the power system. However, the spatiotemporal ...

Energy storage plays a crucial role in enhancing grid resilience by providing stability, backup power, load shifting capabilities, and voltage regulation. While stationary energy storage has been widely adopted, there is growing interest in vehicle-mounted mobile energy storage due to its mobility and flexibility.

Security of Energy Supply in Kosovo KOSTT, OST sign deal to establish Kosovo-Albania regulatory bloc ... So far, power plants and the usage of coal for domestic heating and old vehicles, are considered to be the biggest cause of air pollution. Regardless of the ban by the Ministry of Environment and the Municipality of Prishtina, coal continues

Kosovo has one of the world's largest lignite-coal reserves and it remains dependent on two depreciated and inefficient Yugoslav-era power plants which do not meet Kosovo's energy needs. Electricity consumption and peak demand in Kosovo grew more than 90 percent between 2000 and 2010, stabilized from 2011 to 2018, but increased by another ...
