

LFP Battery Pack 60V ESG New Energy

Are LFP batteries the future of electric vehicles?

According to Goldman Sachs, LFP batteries will account for 38% of the electric vehicle (EV) battery market in 2030, up 16% from 2020. In China, ternary batteries accounted for 49% of the market in 2021, while LFP accounted for 51%, owing to the growing energy density of LFP batteries due to material and technology advancements.

What is the energy density of LFP battery?

For example, in early January of 2021, Guoxuan High-Tech [002074:CH] launched its new LFP battery cell, which has a unit energy density of 210Wh/kg, implying an about 170Wh/kg energy density of LFP battery packs using the cell, slightly higher than other LFP battery products.

What is lithium iron phosphate (LFP) battery?

Lithium iron phosphate (LFP) batteries, a prospective market leading battery type, uses LFP as cathode material. In contrast to the decline in market share of ternary lithium batteries, the installed capacity of LFP batteries jumped up by 20.6% YoY to 24.4GWh in 2020, with its market share rising to 38.3%.

How many LFP batteries does Tesla have in 2021?

Tesla has already ordered 200,000 sets of LFP batteries from CATL for 2021, amounting to 11GWh. In addition to the two production lines reserved for Tesla, CATL also has two other production lines of LFP batteries to offer multiple carmakers its products, such as SAIC-GM-Wuling Automobile (SGMW), Xpeng, NIO [NIO:US], etc.

Should NCM/NCA batteries be switched to LFP batteries?

NCM/NCA batteries use nickel and cobalt, which are largely imported due to the shortage of domestic resources. Considering that Chinese regulators are phasing-out NEV subsidy policies, switching to LFP batteries can help both battery makers and NEV producers reduce their manufacturing costs.

What is ternary lithium battery vs LFP battery?

Ternary lithium battery vs. LFP battery In terms of battery types, ternary lithium batteries are still the main type of batteries used at present, with an installed capacity of 38.9GWh and a market share of 61.1% in 2020, despite a YoY decline of 4.1% in installed capacity.
