

Microlyte MP series AGM SEC Industrial Battery

What is a SEC microlyte MRT AGM battery?

The SEC Microlyte MRT AGM battery is a series of VRLA AGM mono bloc batteries suitable for a wide range of uses. They're built on the Microlyte MP platform but with the addition of high tin plates. This has the double benefit of both increasing life and improving battery cycling. Adding to the already impressive high rate performance.

What is a microlyte MP battery?

The Microlyte MP range is manufactured in SEC's ISO approved factories and is backed by a full 1 year warranty as standard. The Microlyte MP range of AGM batteries combines superior gas recombination technology and great energy density to provide a cost effective option.

Which AGM batteries are best?

The MICROLYTE MP Series of AGM batteries - hard to beat! The SEC Microlyte MP series of VRLA monoblocs are a classic top terminal range of AGM batteries. They were designed as a cost effective but reliable solution for many uses, engineered with lead calcium plates to give them a triple benefit.

Are microlyte AGM batteries backed by a 2 year warranty?

Of course, the MRT AGM battery range is manufactured in SEC's ISO approved factories and is backed by a full 2 year warranty as standard. With over 50 different 6 and 12 volt blocs available the Microlyte AGM battery is suited for a wide range of uses.

Are microlyte batteries reliable?

The Microlyte MP is a range of valve regulated AGM batteries and is available in a wide range of industry standard sizes. This mainstream range still features SEC reliability, but is suitable for all general standby applications at the more cost sensitive end of the market. The RML 48V is compact, robust and incredibly reliable.

What is a SEC microlyte + plus battery?

SEC MICROLYTE +Plus batteries utilize tough, high impact resistant and non-conductive ABS plastic for cases and lids. Batteries are also available in Flame retardant ABS cover and case as an option. SEC MICROLYTE +Plus batteries utilize virgin lead and the best possible raw materials to build a high energy density battery.
