

Microlyte RML series Lithium SEC Industrial Battery

What is microlyte lithium (ml)?

Hardworking, small and lightweight, the MICROLYTE Lithium (ML) range has multiple other benefits. The uniformity of the nano-phosphate particle size provides excellent batch stability and enhanced conductivity.

Are microlyte batteries reliable?

The Microlyte MP is a range of valve regulated AGM batteries and is available in a wide range of industry standard sizes. This mainstream range still features SEC reliability, but is suitable for all general standby applications at the more cost sensitive end of the market. The RML 48V is compact, robust and incredibly reliable.

What is a microlyte MRT AGM battery?

The Microlyte MRT AGM battery is a premium product in the mainstream VRLA monobloc market. High tin plates mean a long float life product with a renowned cycling ability. Add in great high rate performance and you have a product that consistently outperforms all the competition.

What is the RML nano lithium series?

The RML nano lithium series is among the first in the market to use lithium to its true potential. SEC formed strategic alliances with world-class material and equipment suppliers to create this series, which uses patented nano technology in both the positive and negative electrodes to increase uniformity, reliability and performance.

What makes the RML so special?

The RML has fast response times, high rate discharge and charge capability. Combine this with a cycle life in excess of 2000 cycles to 100% depth of discharge and you get market leading unmatched performance for all stationary applications.

Why is nano phosphate a good choice for microlyte lithium?

The uniformity of the nano-phosphate particle size provides excellent batch stability and enhanced conductivity. Combine this with its performance indicating bluetooth TM technology to measure the performance and charge life of your Microlyte Lithium with one simple swipe.
