

1. The Aufbau Principle states that electrons are always placed in the lowest energy sublevel that is available.
2. The Pauli Exclusion Principle states that each orbital may contain a maximum of 2 electrons; electrons must have opposite spins.
3. Hund's Rule specifies that when orbitals of equal energy are available, the lowest energy electron configuration has the maximum number ...

The charging system is an industrial air ... o Storage medium: air, nitrogen or other cryogens. Power range 5 - 650 MW Energy range 10 MWh - 7.8 GWh Discharge time 2 - 24 hours

A hydraulic accumulator is a pressure vessel containing a membrane or piston that confines and compresses an inert gas (typically nitrogen). Hydraulic fluid is held on other side of the membrane. An accumulator in a hydraulic device stores hydraulic energy much like a car battery stores electrical energy.
