

Oasis Passive Inverter 5H 8H 10H 1PH MLT Inverters

What is a Oasis inverter?

The Oasis inverter is ideal for off-grid installations where the renewable source of power is fed directly into the batteries. The Oasis converts the battery power into clean AC power that the load can use. The built-in battery charging function allows the use of a backup generator or the grid without the need for external battery chargers.

Does a Oasis inverter support frequency based output throttling?

The PV-inverter should support frequency-based output throttling. The Oasis inverter will increase the output frequency when the battery is getting close to full and it detects reverse power, if not grid connected at the time, in order for the PV inverter to decrease its power output.

What batteries can be used with the oasis inverter?

A number of batteries can be used together with the Oasis inverter. There are two types of batteries that can be used, Lithium and Lead-Acid. Standard, Gel, Sealed or Low Maintenance battery. This type of battery is designed to provide a large current for a very short period of time.

Can the oasis export power from a grid-tied inverter?

The Oasis cannot export, but if a grid-tied inverter is connected to the output of the Oasis, the Oasis will measure any power exported by the external grid-tied inverter. Total amount of energy imported by the load port. Any power pushed back by an external grid-tied inverter will be logged as Load Import.

Why is my Oasis inverter NOT working?

Alternatively, if the error persists, a possible internal source contactor fault has occurred, please contact MLT inverters. A low battery condition has occurred, if no external source is available, it will shut down shortly with a Battery Empty warning. The Oasis inverter has shut down due to a critically low battery condition.

How does a Oasis measure energy?

The total energy (measured in kWh) taken from the source. The source is typically the grid or alternatively a generator. The Oasis cannot export, but if a grid-tied inverter is connected to the output of the Oasis, the Oasis will measure any power exported by the external grid-tied inverter.
