For these technologies it is deposited using low-pressure chemical-vapour deposition (LPCVD) reactors at high temperatures and is usually heavily doped n-type or p-type. More recently, intrinsic and doped polysilicon is being used in large-area electronics

Polycrystalline silicon is a multicrystalline form of silicon with high purity and used to make solar photovoltaic cells. How are polycrystalline silicon cells produced? Polycrystalline silicon (also called: polysilicon, poly crystal, poly-Si or also: ...
