Will DTE build a battery storage facility at Trenton power plant?

Trenton -- DTE Energy detailed its plans Monday to construct a large-scale battery storage facility at the site of the former Trenton Channel Power Plant, a coal-burning power plant that was retired in 2022 after nearly a century of generating electricity Downriver.

Will DTE Energy become a leader in battery storage?

Detroit, June 10, 2024 (GLOBE NEWSWIRE) -- DTE Energy (NYSE: DTE), Michigan's largest producer of renewable energy, will also become a leader in battery storage as it converts a portion of its retired Trenton Channel coal power plant site to house a 220-megawatt battery energy storage center.

What is the Moss Landing battery energy storage project?

The battery storage project is developed at the existing Moss Landing power plant site. Image courtesy of David Monniaux. The Moss Landing battery energy storage project uses utility-grade lithium-ion batteries LG Energy Solution (LGES). The Moss Landing battery energy storage project began operations in December 2020.

What will be the largest battery energy storage project in the Great Lakes?

When complete in 2026, the energy storage center is expected to be the largest standalone battery energy storage project in the Great Lakes region.

How much battery capacity does a power plant need?

On average, the battery capacity should be equivalent to more than 10% of the installed capacity of the power plant with a standby time of 2 h, such that the energy storage capacity demand of a 1-GW (GW) power plant is 0.2 GWh. Spatial differences in the ratio of RTB potential to demand can be evaluated as in Fig. 4. Fig. 4.

How can a battery management system improve the performance of residential buildings?

A BMS was developed to control the charging and discharging process of the battery to increase its Remaining Useful Life (RUL) and reduce the rate of degradation. Results have shown promising performance of the proposed system with appropriate controlling strategies to provide energy for the residential building.

A rechargeable battery bank used in a data center Lithium iron phosphate battery modules packaged in shipping containers installed at Beech Ridge Energy Storage System in West Virginia [9] [10]. Battery storage power plants and uninterruptible power supplies (UPS) are comparable in technology and function. However, battery storage power plants are larger. ...

MICHIGAN, June 11, 2024 ~ A new massive battery storage facility is coming to the site of the retired Trenton Channel Power Plant in Trenton, Michigan.. DTE Energy has big plans for the former facility, starting

# Retired power plant energy storage batteries

with a name change to the Trenton Channel Energy Center, which it says will be able to store 220 megawatts of electricity, enough to power 40,000 homes.

The integrated system proves feasible for off-grid combined power and heat supply using solar energy and retired EV batteries as storage, though battery degradation impacts long-term performance. ... Buonomano [27] et al. designed a hybrid wind-photovoltaic power plant with energy storage showing limited fluctuations with marginal amounts of ...

In 2021, the Illinois General Assembly passed SB 2408, the Energy Transition Act, an omnibus energy package that cleared a path for Vistra Corp. to build and operate up to 300 MW of utility-scale solar and 150 MW of battery energy storage facilities at nine retired or ...

Combining battery storage system, wind farms can be operated as conventional power plants which promotes the integration of wind power into the power grid. However, high expenses on batteries keep investors away. Retired EV batteries, fortunately, still have enough capacity to be reused and could be obtained at a low price.

DTE Energy, a Michigan-based renewable energy producer, plans to convert a portion of its retired Trenton Channel coal power plant site to feature a 220 MW battery energy storage center. The standalone battery energy storage center in the Great Lakes region is expected to be completed in 2026. The facility will store electricity during times of ...

This paper researches and proposes a multi-scenario safe operation method of the energy storage system for the cascade utilization of retired power batteries, and establishes a safe operation model for the cascade utilization of retired power batteries and the rate of ...
