

# SnapNrack Series 200 Ground Mount System SnapNrack

What is a series 200 ground mount system?

The Series 200 Ground Mount System is a flexible system that optimizes materials and minimizes footprint. The system is designed to easily attach to a standard 1 1/2" galvanized pipe structure using structural pipe fittings.

What components are compatible with SnapNrack S200 rail?

The system design and engineering are fully compatible with ground screws, grade beams & standard pier concrete foundations. The S200 Rail profile is also fully compatible with familiar SnapNrack components like the Ultra Rail module clamps and industry-leading Wire Management Solutions & Accessories.

What is SnapNrack solar mounting solutions?

SnapNrack Solar Mounting Solutions are engineered to optimize material use and labor resources and improve overall installation quality and safety. 877-732-2860 [contact@snapnrack.com](mailto:contact@snapnrack.com) 2022 by SnapNrack Solar Mounting Solutions.

What is the maximum allowable height supported by SnapNrack?

You have exceeded the maximum allowable height supported by SnapNrack's structural engineering packets. This design must be independently reviewed by a structural engineer, or, you must bring the height of leading edge below 48 inches. NOTE: All pipe lengths are estimated to be slightly long.

The SnapNrack Series 200 configuration tool is intended to prepare a mounting system bill of materials according to SnapNrack's structural engineering requirements. This tool is not intended to substitute installation manuals or be ...
