

What is enerbond caprack?

Enerbond Caprack is a flexible module design of graphene & solid-state battery to meet customer's customized demand for large power. The system provides the capacity design from 14.4kWh to 150kWh, and the voltage from 400V to 800V, which is expandable by adding more core modules.

What is enerbond battery?

Based on supercapacitor technology, making the battery projected cycle life up to 20 years. Benefiting from solid-state battery, it uses solid and polymer electrolyte. Our batteries get extreme safety performance. Some of Enerbond products can be used at 5C~20C rate, and they are the perfect options for fast charging-discharging requirements.

What are the different types of graphene battery technology?

Modbus (RS485, RTU), Canbus, and TCP communication are available. As golf courses and recreational facilities seeking eco-friendly solutions that enhance efficiency and performance, the integration of Graphene Battery technology is poised to redefine the golfing experience.

Solid-state supercapacitor batteries with graphene technology stand out as an ideal choice for telecommunications applications, offering a powerful combination of value, longevity, and performance. Probenenergy, a leading provider of high ...
