

The state sells steam energy storage pipelines

Keeping up the pressure in long pipelines is a critical component in the transportation of natural gas. Gas pipelines, which can be several 1000 km long, typically feature a compressor site around every 200 km. At these sites, compressors equalize the inevitable pressure loss, ensuring the requisite pipeline pressure of 75 to 100 bar.

Dominion Energy has executed a definitive agreement to sell gas transmission and storage assets - including more than 7,700 miles of natural gas storage and transmission pipelines and about 900 billion cubic feet of gas storage that the company currently operates - to an affiliate of Berkshire Hathaway Energy in a transaction valued at ...
