

US AGM 12V240 U S Battery

What is the voltage difference between 12V and 24V AGM batteries?

This is true for all 12V AGM deep cycle batteries. Here is the 24V AGM battery voltage chart as well: With this higher voltage 24V deep cycle battery, the voltage ranges from 26.00V at 100% charge to 21.00V at 0% charge; the absolute voltage difference between a full and an empty battery is 5.00V.

What are universal 12 volt AGM batteries?

Universal Power Group's 12 volt AGM batteries are manufactured under the most stringent quality control battery standards. They are non-spillable by DOT (Department of Transportation), ICAO (International Commercial Airline Organization), and IATA (International Airline Transportation Association) definitions.

What is the voltage of a 12V AGM battery?

12V AGM Deep Cycle Battery Voltage Chart (1st Chart). The 12V AGM battery state of charge voltage ranges from 13.00V (100% capacity) to 10.50V (0% capacity). If you, for example, measure the 12.30V voltage on your 12V AGM battery, you can figure out (with the help of the 1st chart) that this 12V AGM battery still has 70% capacity.

What is an AGM deep cycle battery?

U.S. Battery's AGM Deep Cycle Batteries are engineered to deliver reliable deep cycling performance. The Absorbed Glass Mat (AGM) eliminates the possibility of spills and minimizes the need for maintenance.

Where are AGM deep cycle batteries made?

Our AGM Deep Cycle batteries are developed in the U.S.A. and specifically manufactured for U.S. Battery under our guidelines assuring our customers they are being provided the highest quality AGM batteries available. positive active material designed to maintain structure during deep cycling.
