

Where is honda s power storage device

Why is Honda so important?

As a company that provides customers worldwide with a broad range of products in the areas of motorcycles, automobiles and power products, Honda sees it as its important responsibility to expand the use of clean energy for mobility and people's daily lives.

When did Honda start making power products?

In 1968, to cope with the rapid growth of its general-purpose Power Products division, Honda switched to a fully integrated production system that incorporated research and development, planning and design, and production and sales. In 1969, the total cumulative production of Honda general-purpose power products surpassed 1 million units.

Why did Honda develop a portable generator?

For farms that had been suffering from an acute shortage of labor, the compact, red Honda tiller proved to be an innovative agricultural machine that revolutionized Japan's farm work environment. The next item Honda set out to develop was a portable generator. This was inspired by Sony's recent invention of a transistorized portable television.

Honda also exhibited the Mobile Power Pack Charge & Supply - Expandable Concept, which can be used as a power source inside the home accommodating multiple electronic devices. The Mobile Power Pack communicates with other devices and can collect data regarding how it is being used and then send the data to other devices while getting recharged.
