A major highlight of the forum was the update on ... of solar energy is the first stage of implementation of the programme which will contribute to the diversification of Zambia's power mix while ensuring cost-reflective projects for ...

Zambia's Energy Challenges: A Historical Overview. Zambia's electricity woes are not new. El Niño-induced droughts in 2015 and 2019 led to severe load shedding, at times lasting up to 14 hours a day. While short-term fixes alleviated some of the immediate issues, the country remains vulnerable due to its over-reliance on hydropower.

Zambia is potentially self-sufficient in sources of electricity, coal, biomass and renewable energy. The only energy source where the country is not self-sufficient is petroleum energy. Many of the sources of energy where the country is self-sufficient are largely unexploited. [1] As of 2017, the country's electricity generating capacity stood at 1,901 megawatts.
